TREE ANCHORING –TYPE A

For trees up to 1 inch caliper

May, 2001
Effective Date

Typical Section

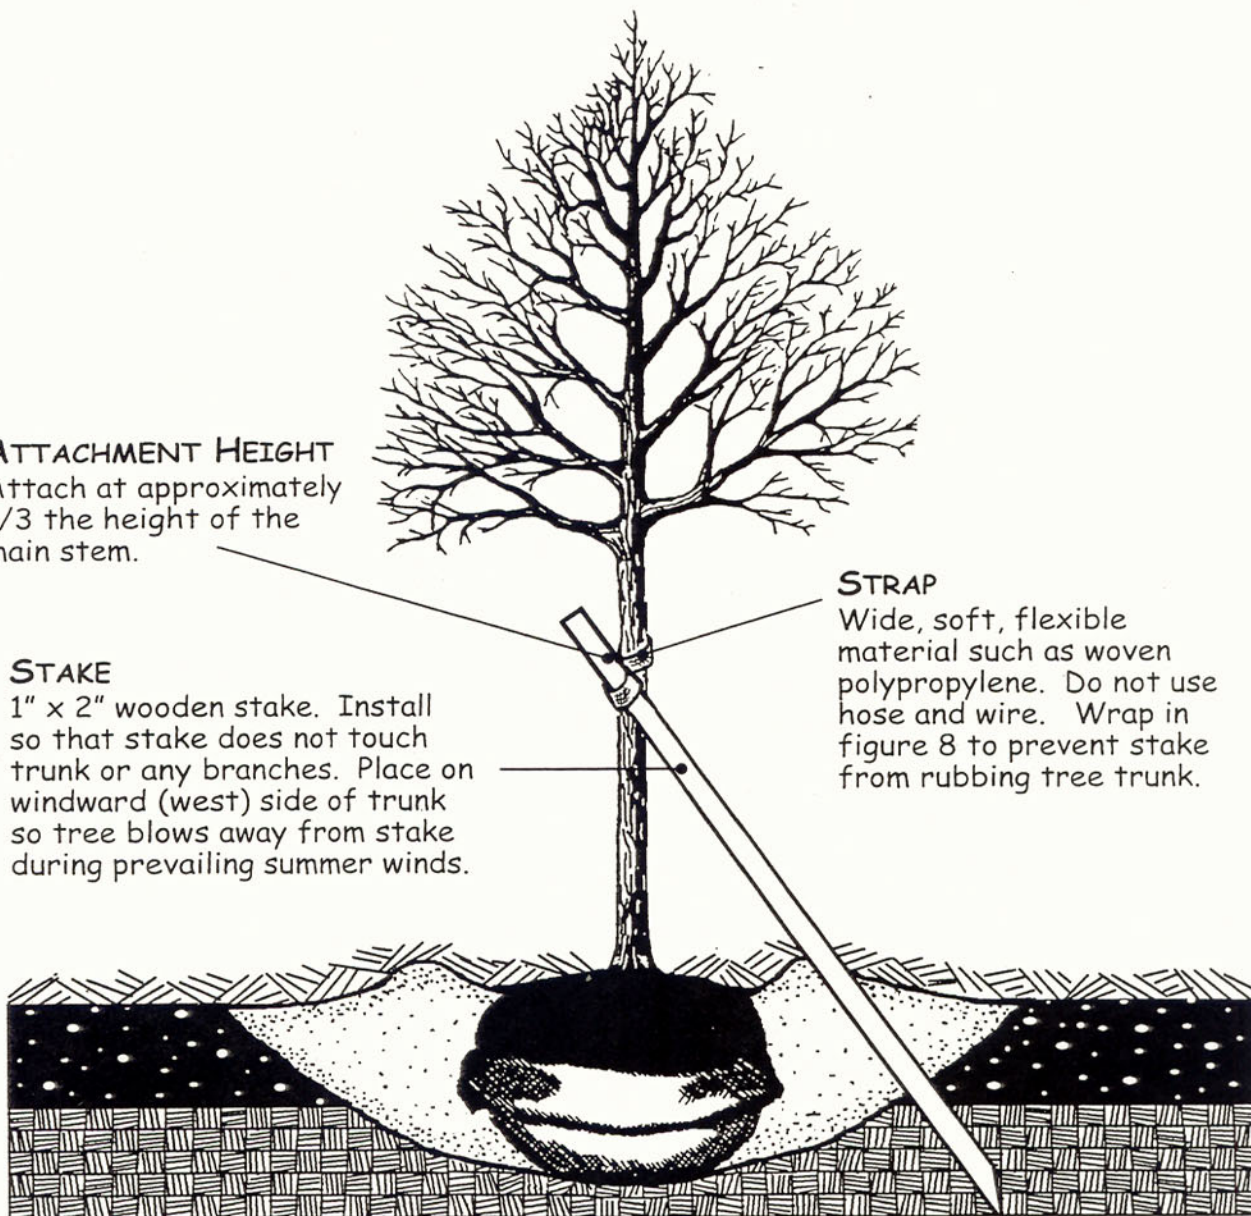

ATTACHMENT HEIGHT
Attach at approximately
1/3 the height of the
main stem.

STAKE

1" x 2" wooden stake. Install
so that stake does not touch
trunk or any branches. Place on
windward (west) side of trunk
so tree blows away from stake
during prevailing summer winds.

STRAP

Wide, soft, flexible
material such as woven
polypropylene. Do not use
hose and wire. Wrap in
figure 8 to prevent stake
from rubbing tree trunk.

Use anchoring systems only where wind or soil
conditions make it necessary. Remove after one year.
